DETAILED ACTION

This is the first Office action on the merits of Application No. 10/584,405 filed on June 6, 2006. Claims 1-20 are currently pending.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). A copy of the certified copy of the priority document has been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

Information Disclosure Statement

The information disclosure statement (IDS) submitted on June 26, 2006 has been considered by the examiner.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "crankshaft" and "engine" recited in line 3 of claim 8 must be shown or the features canceled from the claims. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure

Page 3

number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The abstract of the disclosure is objected to because it includes the legal phraseology "means" in line 6. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

Claim 1 is objected to because of the following informalities: in each of lines 12 and 15 "this" should read -- the --. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The preamble of claim 1 is vague as to whether the friction clutch is in a motor vehicle, and also as to what constitutes the claimed "type". It is suggested that the phrase ",particularly for a motor vehicle, of the type" be deleted.

In line 8 of claim 1, the word "means" is preceded by the word "friction" in an attempt to use a "means" clause to recite a claim element as a means for performing a specified function. However, since no function is specified by the words preceding "means," it is impossible to determine the equivalents of the element, as required by 35 U.S.C. 112, sixth paragraph. See *Ex parte Klumb*, 159 USPQ 694 (Bd. App. 1967).

In lines 16-17 of claim 1 "said element" is unclear inasmuch as an input element, an output element, elastic elements, a friction element, and an element distinct from the web were each previously recited in the claim.

Art Unit: 3655

Regarding claim 8, the phrase "for example" renders the claim indefinite because it is unclear whether the limitation "crankshaft of an engine" following the phrase is part of the claimed invention. See MPEP § 2173.05(d).

Allowable Subject Matter

Claims 1-20 would be allowable if rewritten or amended to overcome the rejections under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: None of the prior art discloses or renders obvious a friction clutch including the specified friction element, web and element distinct from the web in combination with the remainder of the structure recited in independent claim 1, particularly wherein the friction element is capable of being coupled to the web via complementary coupling stops which interact only when the web is displaced angularly in a predetermined direction with respect to the guide washers, and the coupling stops are provided on the friction element and an element that is distinct from the web and from this friction element and is connected in a rotationally fixed manner to the web.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 4,398,625 (Beccaris) and US 5,217,409 A (Dalbiez) each show friction clutch disks including a elastic elements and a friction element.
